

Gel. Protects and cares for skin in the external intimate area

Dear customer,

Many thanks for the trust you placed in us when you bought **FEMAVIVA Gel**. This product was made for you using strict quality criteria.

Why should you use FEMAVIVA Gel?

- Regular care with **FEMAVIVA Gel** helps to build a natural protective skin barrier in the intimate area.
- Lactic acid stabilises the pH value of the gel, thus preserving the protective acid mantle of the skin.
- To optimise the moisture content of dry skin in the intimate area.

What is special about FEMAVIVA Gel?

With its combination of hyaluronic acid, lactic acid, D-mannose, and cranberry and lingonberry extract, **FEMAVIVA Gel** naturally protects the protective function of external intimate flora.

The natural fluctuations of the pH value in the pubic region can weaken the skin's protection in this area, allowing unwanted micro-organisms to multiply more rapidly and trigger skin inflammation or irritation. The special combination of ingredients preserves the important acidic balance.

Moisturising components alleviate the feeling of dry skin in the intimate area, forming a protective and calming film over sensitive skin. This reduces redness and irritation, and allows the skin to recover. The properties of the plant-based ingredients of cranberry and lingonberry extract protect sensitive skin.

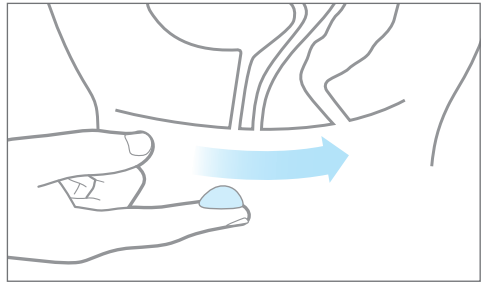

- **FEMAVIVA Gel** was specially developed for the sensitive skin in the intimate area, and has been gynaecologically and dermatologically tested.
- The gently nourishing gel is odourless. The gel film provides additional protection from irritation.
- Using **FEMAVIVA Gel** does not compromise the integrity of latex condoms.

- **FEMAVIVA Gel** can also be used during hormone treatment and when breastfeeding.
- **FEMAVIVA Gel** is vegan.

How to use FEMAVIVA Gel

Before the dispenser is first used, some initial pumps are required; **FEMAVIVA Gel** is then applied as follows:

- Wash your hands thoroughly.
- Pump **FEMAVIVA Gel** 1–2 times onto your index finger and apply this to the skin of the external intimate area. It is very important to begin in frontal areas to prevent any spread of micro-organisms from the anal region.
- Then wash your hands again thoroughly with water.

We recommend applying **FEMAVIVA Gel** several times a day. Use is particularly recommended after going to the toilet, after sexual activity, and also before and after any physical exertion such as sport. **FEMAVIVA Gel** can also be used in the case of skin irritation or inflammation in the intimate area.

Other important information about FEMAVIVA Gel:

- For external use on the skin in the intimate area, not for vaginal use.
- Do not apply to open wounds, the mucosa or the eyes.
- Keep out of the reach of small children.

Ingredients:

aqua, pentylene glycol, cellulose gum, mannose, propylene glycol, hydroxyacetophenone, sodium hyaluronate, lactic acid, bisabolol, vaccinium vitis-idaea fruit extract, vaccinium oxycoccos fruit extract.

Contents:

30 mL gel with practical dispenser

How to store FEMAVIVA Gel:

Protect from light and do not store above 25°C.

Best before: see base of box.

Tips for a healthy external intimate area:

- Do not irritate your intimate area with excessive hygiene so that you preserve the protective acid mantle of the mucosa (washing 1 to 2 times a day is enough).
- Wash your intimate area with your hands or use disposable cloths.
- Wash only with lukewarm water; scented soaps make the mucosa more susceptible.
- Always wash your intimate area from front to back.
- The same applies to drying: always from front to back to prevent any intestinal bacteria entering the vagina.
- Where possible, avoid long baths and long bathing in swimming pools, steam rooms and jacuzzis.
- Change out of wet clothing as soon as possible after swimming, otherwise the mucosa may become irritated.
- We recommend wearing cotton underwear that can be washed at 60 degrees. Where possible, avoid G-strings.
- After using **FEMAVIVA Gel**, you can wear liners for protection – preferably non-scented.
- Before, and if necessary after, sexual intercourse, we recommend applying **FEMAVIVA Gel** in your external intimate area if you have sensitivity.

Other FEMAVIVA products:

For your all-round well-being, also try our **FEMAVIVA Tea**: Soothing tea made from high-quality birch and nettle leaves and blackberries with a fruity taste. Specially developed with nutritional scientists.
